

Set up:

To access, all you have to do is go to: <http://alexdomina.net/Parthenon/parthenon.html> and you can use the program in the browser.

Controls:

Press "F" to fly down

Press "R" to fly down

Press "E" to rotate right around spawn point

Press "Q" to rotate left around spawn point

Press "A" to move left

Press "D" to move right

Press "W" to move forward

Press "S" to move backwards

Press "CTRL" and "R" to reload

Troubleshooting:

If you lose the model, you can either use the motion and rotation controls to attempt to relocate, or you can use "CTRL" and "R" to reload the page.

If you have difficulty handling the rotation of the object, rotating around the starting location and then moving backwards towards the part you want to see, it is the easiest way to look at different parts of the temple.
